## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by the article “3-D Digital Surface Recovery of the Optic Nerve Head from Stereo Fundus Images,” Proc. Fifth Annual IEEE Symposium on Computer-Based Medical Systems, Durham North Carolina, June 14-17, 1992, pp. 284-291, to Ramirez et al (hereinafter “Ramirez”).

3. Ramirez discloses the process claimed by Applicant. Ramirez discloses a process for detecting optic disc deformation, including cupping (p.284, “Introduction”), wherein a stereo image pair of an optic disc is preprocessed and registered via cepstral analysis (p. 285, “Methodology”), subjected to feature extraction, a coarse-to-fine disparity algorithm (p.287, “Hierarchical search for window-matching”) and cross-correlation (p.288, “Cross-Correlation”) in order to determine a 3-D representation of the optic disc. Ramirez discloses smoothing the sparse disparity matrix using cubic B-spline interpolation (p.289, “Interpolation by cubic B-spline”). Ramirez discloses a non-convergent imaging system (p. 286, Fig. 2).

### ***Conclusion***
